About Me

Driven Full Stack Developer who has cultivated advanced technical skills through intensive project development and self-directed learning. I've successfully built and deployed multiple web applications featuring complex functionality like real-time data processing, user systems, and responsive interfaces. Eager to apply my strong foundation in modern ecosystems and rapid learning ability to professional development challenges.

Experience

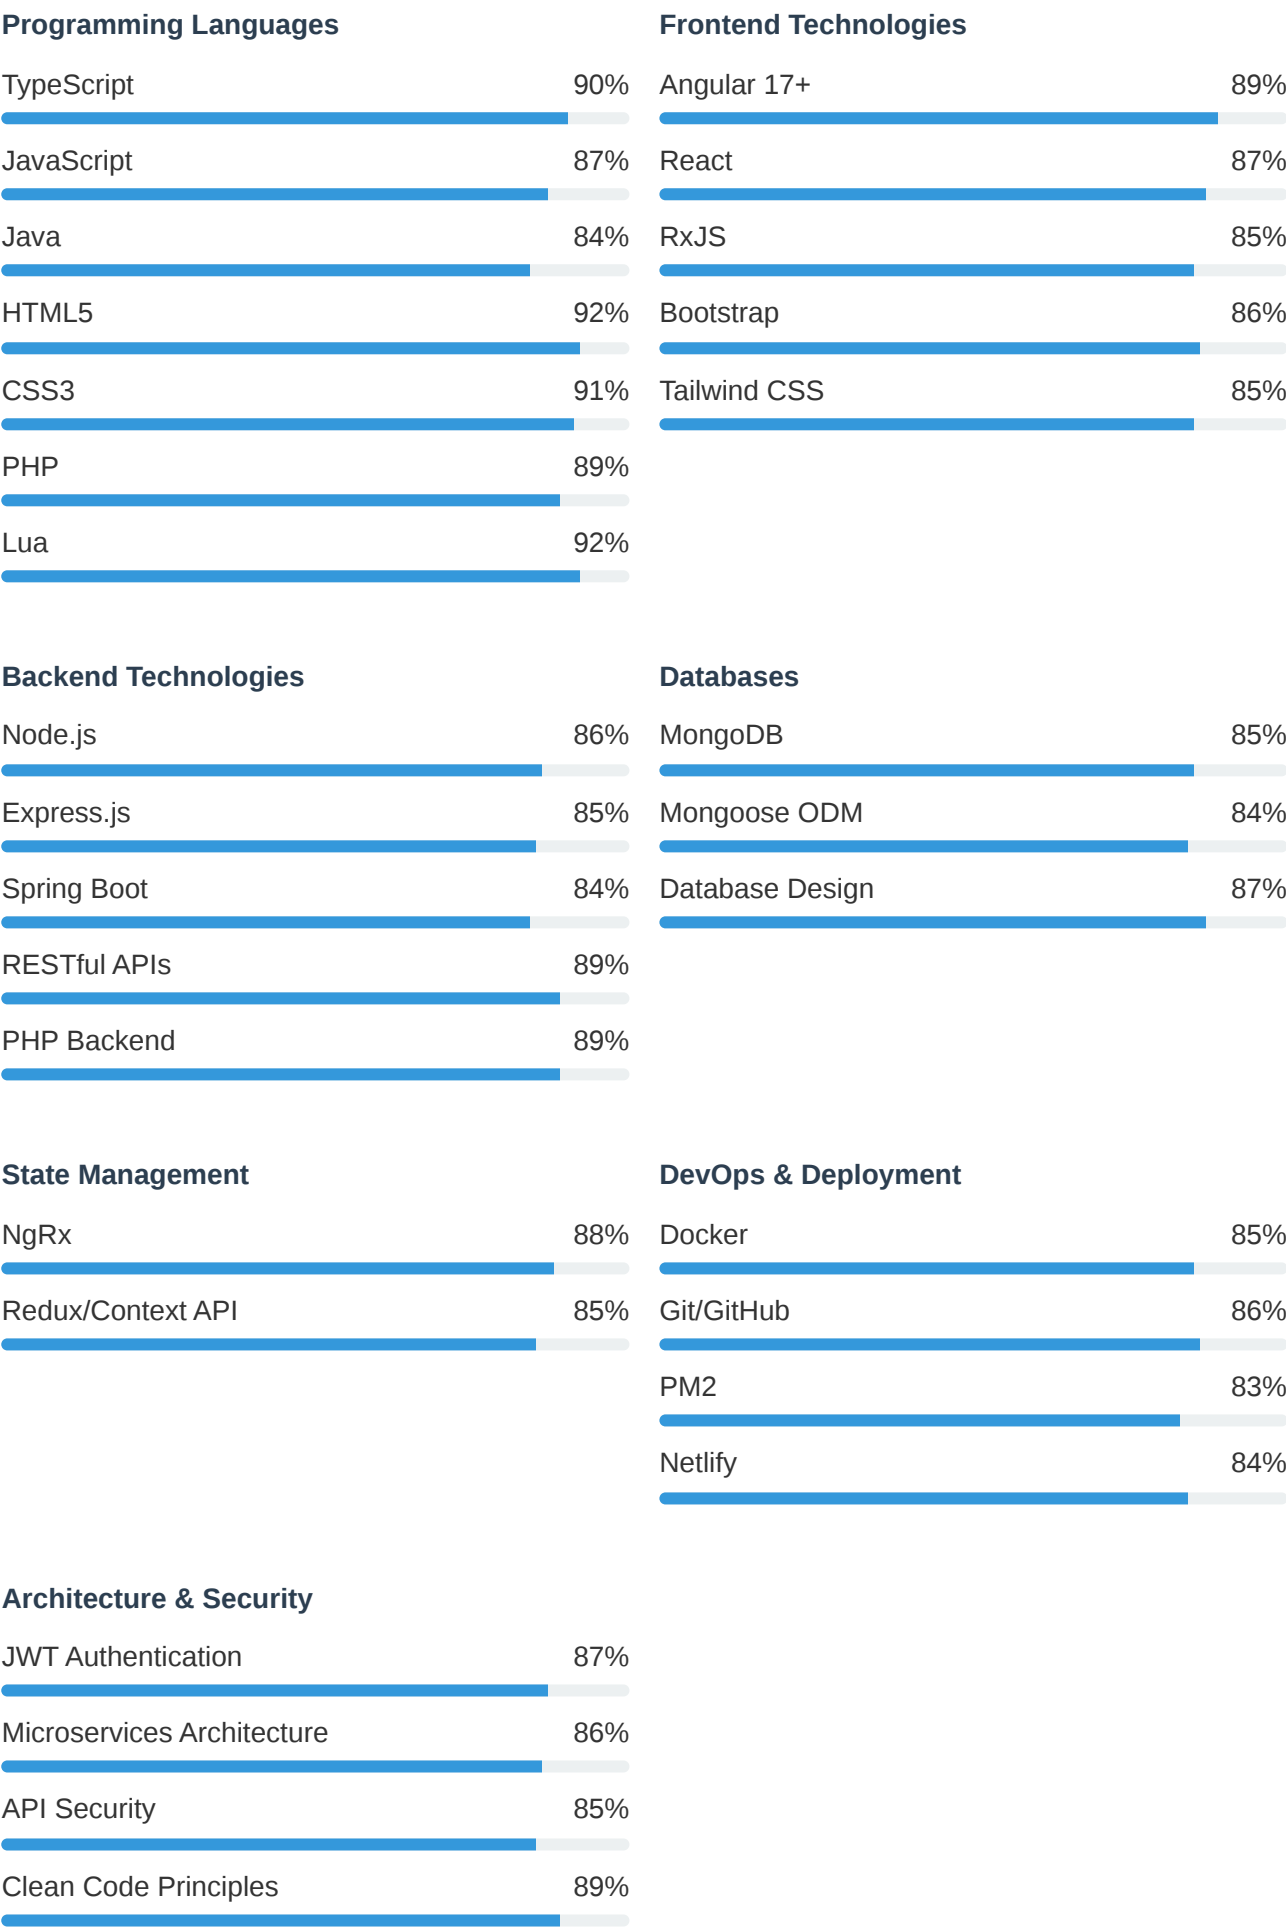

BYT Tournaments 04.2025 - Present

Co-Founder / Developer

- Built and launched gaming tournament platform from concept to deployment
- Developed full-stack application architecture and user experience design
- Implemented real-time features for tournament management and user engagement like Map Vetos and Match Scheduling
- Managed technical infrastructure

HTML5 CSS3 PHP JavaScript MySQL API Integration Python

Technical Skills

Projects

Full-Stack Ecommerce Solutions

Comprehensive ecommerce implementations showcasing expertise across multiple tech stacks. Includes Angular/Node.js/MongoDB.

Angular 17+ TypeScript NgRx Bootstrap RxJS Responsive Design Node.js Express.js TypeScript
JWT Authentication MongoDB / Mongoose PM2

GitHub Frontend GitHub Backend Live Demo

Modern Portfolio

Advanced React/Next.js portfolio website featuring interactive canvas animations, responsive design, and optimized performance. Built with TypeScript and modern web technologies.

Next.js React TypeScript CSS3 Canvas API (Framer) Motion Responsive Design Netlify

GitHub Live Demo

CV Page

CV website featuring interactive canvas animations, responsive design.

HTML5 CSS3 JavaScript Canvas API (Framer) Motion Responsive Design Netlify

Leaderboard with API

A Leaderboard that fetches Data via an API from a Mount & Blade: Warband Server, saves that data into a MySQL Database and then shows it. Includes Matchweek and Division Filter as well as profile pages for each player. It's a part of a whole Website with working Map Veto, Login System and more which I've done myself.
